

Constellation Energy[®]

CONSTELLATION ENERGY PROJECTS AND SERVICES

Constellation Energy delivers energy and environmental solutions that help customers save energy, minimize costs and reduce greenhouse gas emissions. Our expert, dedicated staff leverage all available resources to deliver solutions designed to achieve your energy, cost-management and sustainability goals.

In the last 25 years, our Projects & Services professionals have implemented and helped finance more than 4,000 energy projects. Being part of one of the nation's leading energy companies allows us—and our customers—to tap the talent and expertise of other Constellation Energy companies, ensuring delivery of the most technologically advanced, cost-and energy-efficient solutions.

RENEWABLE ENERGY

Assisting our customers to realize the full benefits of renewable energy—with affordable, reliable green energy projects that modernize facilities, reduce their carbon footprint and energize stakeholders. We can adapt existing systems to make them more energy-efficient and or develop new “showcase” renewable projects.

ENERGY EFFICIENCY SERVICES

We thoroughly evaluate your existing energy infrastructure and usage from point of procurement to final end use. Project design and implementation may include traditional conservation measures such as upgrading lighting, controls and/or HVAC, system retrofits, or new construction. These measures can be implemented through energy-saving performance contracts that finance projects through guaranteed savings.

ENERGY ASSETS

On-site generation assets provide traditional and/or renewable options for energy reliability, efficiency, and cost-effectiveness—often with guaranteed results. Our award-winning shared energy plants and district energy plants in major cities around the country demonstrate our expertise and ensure that you are working with a nationwide leader.

CONSULTING

As your trusted energy advisor, we provide sound strategies for reducing volatility and better managing your energy expenditures. We also can evaluate the amount of carbon your current operating situation creates and then recommend ways to reduce and/or offset them to reach a carbon-neutral goal.

ENERGY SUPPLY

We provide a host of energy supply options, from managing your wholesale energy supply to green energy procurement. We can arrange for you to meet green energy needs through Green-E certified energy, Renewable Energy Certificates from solar, wind, hydro and landfill biomass, and long-term power purchase agreements.

FEDERAL CUSTOMERS

We've completed and continue to work on numerous projects for civilian and military government agencies. We hold energy savings contracts with DOE, GSA and DOD, working through these Contracting Vehicles:

- DOE ESPC Contract
- U.S. Army Corps of Engineers ESPC Contract
- GSA Utility Energy Service Contract

OUR CUSTOMERS

U.S. Army Aberdeen Proving Grounds Aberdeen, MD

- *Financed and installed 643 energy-efficient geothermal heat pumps*
- *Approximately 8.6 MW reduction in annual energy usage and \$600,000 annual cost savings*
- *20-year service contract*

Washington Suburban Sanitary Commission Laurel, MD

- *Financed construction of 30 MW wind farm to provide 70,000 MWh annually—85-percent of total wind farm output—under 10-year PPA*
- *Estimated \$20-million in total renewable energy savings*
- *\$20-million capital improvements project covering six waste water treatment facilities and headquarters*

McCormick & Company, Inc. Sparks, MD

- *1 MW solar installation using thin-film PV and crystalline solar panels*
- *Projected 30-percent reduction in electricity costs for solar equipped buildings in year one*
- *20-year power purchase agreement*

Oklahoma City Housing Authority Oklahoma City, OK

- *12-year Energy Performance Contract*
- *\$5.15-million capital improvement project*
- *\$1.2-million average annual savings*
