

Environmental Information for Electricity Supplied by Constellation

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Constellation will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in Maryland.

Energy Source (Fuel Mix)

The values shown represent Q3 2017 through Q2 2018 averages for the Mid-Atlantic region

Renewable energy sources subtotal: 4.97%

Coal	30.83%
Natural Gas	28.60%
Nuclear	35.35%
Oil	0.22%
Unspecified Fossil	0.03%
Renewable Energy	
Captured Methane Gas	0.32%
Geothermal	0.00%
Hydroelectric	1.09%
Solar	0.23%
Solid Waste	0.49%
Wind	2.61%
Wood or other Biomass	0.23%
Unspecified Renewable	0.00%
Total	100.00%

Air Emissions

The amount of air pollution associated with the generation of the electricity production for this region is shown in the table at right.

	Pounds Emitted per Megawatt Hour of Electricity Generated
Sulfur Dioxide (SO ₂)	0.74
Nitrogen Oxides (NO _x)	0.61
Carbon Dioxide (CO ₂)	945.10

CO₂ is a “greenhouse gas,” which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also react to form ground level ozone, an unhealthy component of “smog.”

Constellation is a member of the PJM regional transmission organization; therefore, the environmental information contained herein includes regional data calculated by PJM. For additional information about this label, contact Constellation at (855) 465-1244.
