Environmental Information for Electricity Supplied by Constellation

Energy Source (Fuel Mix)

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Constellation will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in the District of Columbia.

| The values shown represent Q1 2023 through Q2 2023 averages for the Mid-Atlantic region | Coal | 14.22% |
|---|----------------------|--------|
| | Oil | 0.27% |
| | Natural Gas | 43.17% |
| | Nuclear | 34.46% |
| | Unspecified Fossil | 0.10% |
| | Renewable Energy | |
| Renewable energy sources subtotal: 7.79% | Solar | 1.39% |
| | Wind | 4.24% |
| | Biomass | 0.18% |
| | Captured Methane Gas | 0.30% |
| | Water | 1.15% |
| | Geothermal | 0.00% |

Air Emissions

| The amount of air pollution associated with the generation of the | Pounds Emitted per Meg Gener | |
|---|------------------------------------|--------|
| electricity production is | Sulfur Dioxide (SO ₂) | 0.31 |
| shown in the table at right. | Nitrogen Oxides (NO _x) | 0.24 |
| _ | Carbon Dioxide (CO ₂) | 704.34 |

Total

 CO_2 is a "greenhouse gas," which may contribute to global climate change. SO_2 and NO_x released into the atmosphere react to form acid rain. NO_x also react to form ground level ozone, an unhealthful component of "smog."

Constellation is a member of the PJM regional transmission organization; therefore, the environmental information contained herein includes regional data calculated by PJM. For additional information about this label, contact Constellation at 855-465-1244.
