

Measure and manage emissions with confidence using credible, data-driven reporting

You cannot manage what you cannot see. Constellation Navigator's Carbon Accounting solution applies data and automation to help organizations establish an emissions baseline, standardize reporting across frameworks, and connect emissions reporting to practical carbon reduction planning.

Comprehensive Carbon Accounting Solutions

Data Collection and Emissions Calculation

Consolidate Scope 1, Scope 2, and applicable Scope 3 emissions data. Automate and streamline emissions calculations using standardized methods.

Reporting and Framework Alignment

Format and export emissions data aligned to widely used reporting frameworks to support internal and external reporting needs.

Reduction Planning and Performance Tracking

Visualize emissions, model reduction scenarios, and track performance over time to support actionable decarbonization strategies.

Constellation Navigator helps turn sustainability ambition into measurable, definable goals.
